

## GD1000 - DURAPOD GRAVITY BIN DISMANTLING AND ASSEMBLY INSTRUCTIONS

Once complete Bin with Base is removed from shelf separate bin from Base by pushing lever down at rear of base and sliding Bin Body forward to release Body from Base

Lift gravity bin from base and place on flat surface facing you. Remove lid.

To remove the false front turn the two black clips on the front side of the bin, this spreads the false front for removal.

Then remove the false front from the bin body by pinching the two clips at top of false front between thumb and forefinger and pull the false front towards you.

Lay bin body on one side, slide the four white clips upward (two on the front and two on the under side), turn catch at bottom front.

With the bin body still laying on it's side separate the two halves by lifting the top side away from the bottom side, remove the trap door. The bin is fully apart ready for cleaning.

The GD1000 - 4" Bin completely disassembled ready for cleaning

Once the bin is clean re-assemble in the same way, only in reverse, holding the top side at a 30° angle and locate the four locating teeth along the rear of the bin body, once located, lower the front edge. Slide the two bottom white clips downward and the top front clip, leave the bottom front clip unlatched until you have inserted the trap door, stand bin body up facing you and insert the trap door by hooking one side into one of the two inserts, then the other working from the inside out, once trap door is in position, slide the last bottom front white clip down. Replace the false front by locating the two top clips in position, push bottom of false front in place and turn the two black clips to lock in place (right side first, then left side). Replace lid and slide onto base ready to place back fully assembled bin onto the shelf.
